## PROJECTS

### Birthday Notification Sending Application

- Developed a web application to send birthday notifications via Email to university students and alumni using React.js, Node.js, Express.js, JavaScript, and MongoDB.
- Implemented user authentication and notification scheduling features.
- Ensured data integrity and seamless notification delivery through robust backend services.

### Portfolio Website

- Designed and developed a personal portfolio website using React, HTML, CSS, and JavaScript to showcase projects, skills, and experiences.
- Implemented responsive design principles to ensure the website is accessible and visually appealing on various devices and screen sizes.

### Diet Recommendation System Using Machine Learning

- Developed a diet recommendation system using Machine Learning to predict and suggest personalized food choices based on nutritional input.
- Implemented food classification models using Python, Flask, and Scikit-learn to analyze user-provided values like calories, protein, and fiber.
- Trained the model on a nutritional dataset to recommend foods for muscle gain, weight gain, and weight loss, incorporating dietary preferences.
